Researchers have been working to understand the clear relationship between kidney disease and heart disease. When your heart or kidneys cannot function normally, it can lead to cardiovascular disease (heart disease) or kidney disease. It is important to know that having kidney disease can directly affect your chances of developing heart disease.

The Heart and Kidney Connection | National Kidney Foundation

Cardiorenal syndrome is an umbrella term used in the medical field that defines disorders of the heart and kidneys whereby “acute or chronic dysfunction in one organ may induce acute or chronic dysfunction of the other”. The heart and the kidneys are involved in maintaining hemodynamic stability and organ perfusion through an intricate network. These two organs communicate with one another through a variety of pathways in an interdependent relationship. In a 2004 report from National ...
