people feel uncomfortable about “going under the knife.” It is important to make sure that fears and anxiety don't become too overwhelming.

What can help relieve anxiety before surgery? - Surgery

...

Surgery evokes a series of hormonal and metabolic changes commonly referred to as the stress response. There is increased secretion of pituitary hormones and activation of the sympathetic nervous system. Increased catabolism mobilizes substrates to provide energy. Salt and water retention occur to maintain fluid volume and cardiovascular homeostasis.

Stress and Your Thyroid: What's the Connection?

□Physiological responses elicited in the body with surgical stress include sympathetic nervous system, endocrine system and immunological responses. □The physiological responses elicited by the stress response can interact with baseline medical conditions to create complications. Study of the Stress Response

The Perioperative Stress Response

The stress response begins in the brain (see illustration). When someone confronts an oncoming car or other danger, the eyes or ears (or both) send the information to the amygdala, an area of the brain that contributes to emotional processing. The amygdala interprets the images and sounds. When it perceives danger, it instantly sends a distress ...
