The Bee-eaters: Amazon.co.uk: Fry, C. Hilary ...

This nugget comes from the two very fine books on bee-eaters by C. Hilary Fry (Fry 1988, Fry et al. 1992), a Brit who has spent substantial time studying them in Africa and the Middle East. His first book nicely summarizes the family this way: 'Admirable' is the word for bee-eaters. Being birds of the sun, none live in Britain . . . yet ...

The bee-eaters are a group of near passerine birds in the family Meropidae, containing three genera and twenty-seven species. Most species are found in Africa and Asia, with a few in southern Europe, Australia, and New Guinea. They are characterised by richly coloured plumage, slender bodies, and usually elongated central tail feathers. All have long down-turned bills and medium to long wings ...

Review: Kingfishers in the frame | New Scientist

Like other bee-eaters, Nyctyornis species are colourful birds with long tails, long downturned bills and pointed wings. They are large bee-eaters (blue-bearded is the largest of all bee-eaters), predominantly green, with a face colour as indicated by the species' name. This colour extends on to the slightly hanging throat feathers to form the ...
